

Approval Hub v2 — Wireframes

Two presets: Project Manager view and Line Manager view. Same page, same components, different default filters and grouping.

Preset: My Projects

Auto-filters to projects managed by the logged-in user. Groups by Project. Shows equipment + costs per project.

Design Notes

Quick Filter Presets

Preset	Auto-sets	Group by	Who sees it
My Division	division = user's division, status = SUBMITTED	Employee	Line managers (Cognito group: managers)
My Projects	projects = where user is projectManagerId, status = SUBMITTED	Project	Project managers (managerId on Project table)
All Pending	status = SUBMITTED, no division/project filter	None (flat)	Administrators

KPI Definitions

KPI	Calculation
Hours (employee/equipment)	Sum of all entries. Equipment hours = entries where equipmentId is not null.
Costs (employee/equipment)	From TimesheetArticleEntry.calculatedAmount. Split by whether entry has equipmentId.
Own / IC hours	Own = project.divisionId == timesheet.divisionId. IC = different.
Own / IC costs	Same split applied to calculatedAmount.
Resources	Count distinct employeeIds / count distinct equipmentIds in filtered set.
Pending	Count of timesheets with status = SUBMITTED in current filter.

Group by Options

Group	Header shows	Rows show
None	—	Flat: Employee Division Week Mo-Su Total Cost Status
Employee	Name, div, total hours, cost, chargeability, leave	Projects within employee's timesheets
Project	Code, name, total hours, cost, budget bar, IC badge	Employees on that project + equipment
Division	Division name, own hours, IC hours, cost split	Employees within division
Equipment	Equipment code+name, total hours, cost	Employees + projects per equipment

Intercompany (IC) Logic

IC = `project.divisionId` $\neq$ `timesheet.divisionId` (which equals the employee's division).

- IC entries get amber left-border + [IC] badge
- In "Group by Division": IC section shows where employees went (outgoing) and who came in (incoming)
- Equipment on IC projects is included in the IC cost/hours calculation
- KPI "Own / IC" uses this split for both hours and costs

Costs Source

Costs come from `TimesheetArticleEntry.calculatedAmount` (pre-resolved by CAO calculator at submission time). If no article entries exist (e.g. old migrated data), cost shows "—". Equipment costs are the subset of article entries linked to equipment-bearing timesheet entries.

Server Changes Required

- Add `projectDivisionId` to `TimesheetProjectBreakdown` (for IC detection)
- Add cost field to `TimesheetSearchItem` (sum of `calculatedAmount` for the timesheet)
- Add `projectCost` to each project breakdown item
- KPI endpoint: add `totalCosts`, `icHours`, `icCosts`, `employeeCount`, `equipmentCount`
- Support `groupBy` parameter in search query for server-side grouping (optional — can do client-side for <200 items)
